- Includes a rest support for the hand piece
- Nozzles sold separately

**Order today....**

**Offer valid October 15  
through December 31, 2007**

### FREE!

#### Patented Nozzle Technology

Weller nozzles use conducted heat from an integral hot plate to heat the defective component to a temperature just below the solder melting point. Weller nozzles then direct hot air precisely onto the legs of the component to melt the solder joint, allowing removal of the component.

See page 39 of Weller catalog no. 550543 for a list of available hot air nozzles
